

Pacific North-West TURNKEY CRYPTOMINING BUSINESS & DATA CENTER FOR SALE

State-of-the-art crypto-mining business and data center

The operations and facility are purpose-built with the highest levels of efficiency, low power costs and highly automated systems to allow for remote management of the facility.

This is a highly unique opportunity to acquire a Turnkey crypto-mining business and data center with a successful history of operations. The configuration could be easily expanded to include traditional data center racks, high performance computing, or other energy intensive uses.

The facilities currently draw 3.5 MWs of power feed, with capacity available to grow to 5 MWs already built out. Additional expansion is possible with the addition of additional on site electrical infrastructure.

The sale of this crypto-mining business operations and data center includes the data center facility, customized mining containers, all support equipment, infrastructure, and existing S9 Antminers. Additional features include controlled access entry security and remote automated management systems.

This is a ready to go business opportunity!
